

AMENDMENTS TO THE CLAIMS

1. (Currently amended) A process for producing of a silicone compound which includes a synthesis reaction of a silicone compound represented by the following formulas (a) and/or (a'),
 [Formula 3]

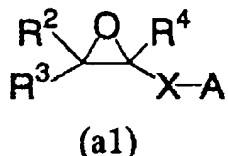

by reacting a carboxylic acid represented by the following formula (a2)

[Formula 2]

to an epoxy silane represented by the following formula (a1)

[Formula 1]

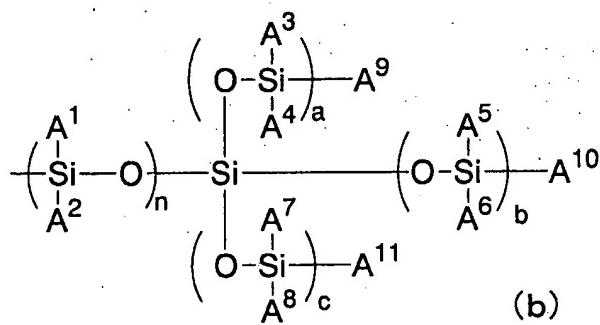

in presence of a metal salt of the carboxylic acid represented by the general formula (a2),
characterized in that wherein the reaction is carried out in presence of 0.05 wt% or more water in
 said reaction system, [[. (Here,]] wherein A denotes siloxanyl group, R¹ denotes a substituent with
 1 to 20 carbons having a polymerizable group, [[.]] R² to R⁴ respectively and independently denote
 hydrogen, a substituted or unsubstituted substituent with 1 to 20 carbons, or -X-A, [[.]] and X
 denotes a substituted or unsubstituted divalent substituent with 1 to 20 carbons.[[.]])]

2. (Currently amended) A process for producing of a silicone compound, characterized in that wherein the silicone compound obtained according to Claim 1 is purified by a silica gel column or an alumina column.

3. (Currently amended) A silicone compound obtained by the process according to Claim 1 [[or 2]], wherein the siloxanyl group A is an atomic group represented by the following formula (b), [[.]]

[Formula 4]

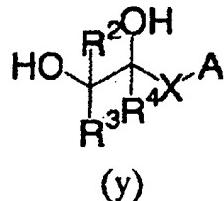

(In the formula wherein, A¹ to A¹¹ respectively and independently denote any one of hydrogen, a substituted or unsubstituted alkyl group with 1 to 20 carbon atoms and a substituted or unsubstituted aryl group with 6 to 20 carbons, [[.]] n denotes an integer of 0 to 200, a, b and c denote respectively and independently an integer of 0 to 20, [[.]] However, the case of and n = a = b = c = 0 is not included. [[.]])

4. (Original) A silicone compound according to Claim 3, wherein the siloxanyl group A is selected from the group consisting of tris(trimethylsiloxy)silyl group, bis(trimethylsiloxy)methylsilyl group and trimethylsiloxydimethylsilyl group.

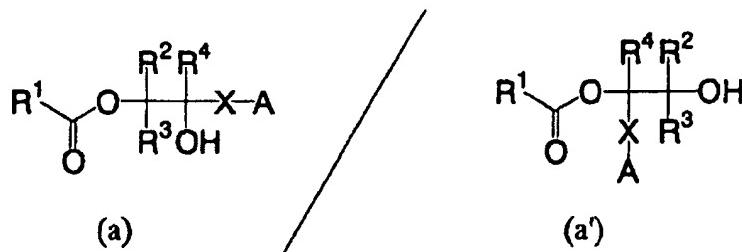

5. (Currently amended) A silicone compound in which a content of a compound represented by the following general formula (y) is 0.4% or more and 3% or less,

[Formula 5]

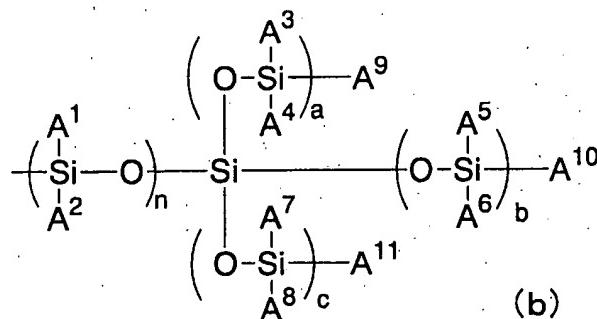

and the purity of the silicone compound represented by the following general formulas (a) and/or (a') is 87% or more, [.]

{Formula 6}

(Here, wherein A denotes a siloxanyl group, [.] R¹ denotes a substituent with 1 to 20 carbons having polymerizable group, [.] R² to R⁴ respectively and independently denote hydrogen, a substituted or unsubstituted substituent with 1 to 20 carbons, or -X-A, [.] and X denotes a substituted or unsubstituted divalent substituent with 1 to 20 carbons.[.])]

6. (New) A silicone compound obtained by the process according to Claim 2, wherein the siloxanyl group A is an atomic group represented by the following formula (b),

wherein, A¹ to A¹¹ respectively and independently denote any one of hydrogen, a substituted or unsubstituted alkyl group with 1 to 20 carbon atoms and a substituted or unsubstituted aryl group with 6 to 20 carbons, n denotes an integer of 0 to 200, a, b and c denote respectively and independently an integer of 0 to 20, and n = a = b = c = 0 is not included.
